

PRESS RELEASE

Enabling medical professionals with targeted learning to manage patients during the COVID-19 pandemic

Bangalore, 20th March 2020: Impelsys acknowledges the efforts of all the doctors, nurses and allied health staff working tirelessly in battling the Covid-19 pandemic. As the virus spreads across the country it's important that relevant training material is available for healthcare professionals at their fingertips. Impelsys with its deep domain expertise in medical content and digital learning has created an online program on **COVID-19 Infection Control & Emergency Preparedness**.

The COVID -19 program on Infection Prevention and Emergency Preparedness can be accessed over the iPC Health app and portal by all healthcare professionals free of charge. The program focuses on the infection outbreak and prevention strategies for healthcare organizations. It will serve as a quick preparation guide for healthcare workers with focused course modules on four learning areas: COVID-19, Infection outbreak, HIC-Implementation protocol and Community Emergency Services. The free online learning program is intended for all healthcare professionals to empower them with the knowledge to help them in their preparedness and response to COVID-19. The course is available on the iPC Health App on Android & coming soon on iOS .To do the course on the web please visit <https://explore.ipchealth.in/product-details-page/1397>

"While we are constantly tracking the spread of COVID-19, it is evident that the medical professionals at the forefront of care, are at the highest risk of infection. It was our responsibility to help the doctors, nurses and allied healthcare staff by creating courses that can train them in this crucial time. This course informs, educates, and prepares health workers nationwide to care for patients while safeguarding themselves in this unprecedented time. Available for free on both our iPC Health portal and the app, this instructional course will help the health workers to get information on their fingertips as it can be accessed anytime and anywhere," said **Sameer Shariff, Founder and CEO, Impelsys**.

Addressing the rising concerns over the growing COVID-19 (Coronavirus) cases across the nation, Dr.Naresh Shetty, **President, M.S.Ramaiah Memorial Hospital** recently spoke about the importance of digitally training medical professionals and hospital staff to deal with such highly contagious medical emergencies. "The alarming spread of COVID-19 nationwide is demanding top performance from hospital employees and healthcare workers who are actually at the forefront of tackling the infectious virus. Of late, there are several control protocols and informal training across hospitals to train the staff about how to respond to such an epidemic. However, we urgently need easily accessible courses to train the medical workforce to deal with such a critical and extremely communicable disease. Being virtual, such modules will limit large gatherings and in-person contact; thereby minimizing the possibility of any infection transmission during classroom sessions and ensuring safety".

"Our team of subject matter experts and e-learning specialists have developed up-to-date courseware materials on this virus, which is intended for the healthcare professionals involved in such critical care responsibilities. These courses are available across all digital platforms such as smartphones, laptops, and desktops and in various formats, which will help us to reach out to both the urban and rural healthcare professionals. On our mission to improve the healthcare delivery in India by spreading

knowledge through technology- we will continue to make such efforts to boost the quality of healthcare services in the country," **Shariff** further added.

About iPC Health

iPC Health is a comprehensive learning, training and skill development platform for healthcare professionals. It is designed to be a mobile-first solution enabling round the clock learning. The platform offers an extensive list of modules for compliance, employee induction, continuing education and soft skills training. It is an end-to-end learning management platform that will help the hospitals in streamlining their compliance training, recruitment, assessment and onboarding cycles. Visit www.ipchealth.in to learn more about how iPC Health can help hospitals and healthcare professionals.
